Professional Summary

Aspiring Software Engineer with a strong foundation in Java development and web technologies. Passionate about designing and delivering scalable solutions in agile development environments. Skilled in core Java, React frameworks, and SQL databases. Quick learner with excellent communication abilities and a collaborative team mindset, eager to contribute to innovative software projects and drive impactful results.

EDUCATION

Acropolis Institute of Technology and Research

Bachelor of Technology in Data Science (7.62/10.0 CGPA)

Indore, Madhya Pradesh (India)

2024

Specialization: Data Science, Data Analytics, Data Visualization, and Machine Learning

Little Flower School

12th Class – CBSE – (72.8%)

Indore, Madhya Pradesh (India)

2020

SKILLS

Language and Database: Java, Python, JavaScript, SQL.

Frameworks: Spring Boot(basics), React (basics)

Tools Git, Postman, Power BI

Soft Skills Strong communication, Team collaboration, Quick learning ability

CERTIFICATIONS AND CLEARANCE

Wipro Talent Next Program – Full Stack Java Application Development (2024)

Professional Experience

A2Z Digital Marketing

Indore, India
(Jan 2024-Present)

- Utilize Google Tag Manager to implement and manage tracking codes for website analytics, ensuring accurate data collection.
- Analyze user behavior and campaign performance using Google Analytics, providing actionable insights to optimize marketing strategies.
- Create interactive dashboards and reports in Google Looker Studio to visualize key metrics and support data-driven decision-making.
- Perform data querying and analysis using Google BigQuery to extract insights from large datasets, enabling deeper understanding of customer trends.
- Collaborate with cross-functional teams to enhance data tracking and reporting processes, improving overall campaign effectiveness.

Personal Projects

Spring Boot + React CRUD Application

- Built a microservice-based app for user management with Spring Boot (backend) and React (frontend).
- Tech Stack: Java, Spring boot, React, MySQL.

Facial Recognition Attendance System:

- Developed a facial recognition system using Convolutional Neural Networks (CNNs) in Python to automate attendance tracking.
- Achieved 90% accuracy by comparing live images with trained data and marking attendance with date and time.
- Proposed future enhancements, including integration with CCTV cameras for automated class-wide attendance.

House Price Prediction:

- Built a Linear Regression model to predict house prices based on features like area income, house age, number of rooms, and population.
- Utilized a dataset of US residential properties to train the model and analyze the relationship between features and prices.
- Evaluated model performance using metrics like RMSE and R-squared.
